## **ABSTRACT**

An organophotoreceptor comprises an electrically conductive substrate and photoconductive element on the electrically conductive substrate, the photoconductive element having

a) a charge transport composition with the formula

where Y<sub>1</sub> and Y<sub>2</sub> are, each independently, an arylamine group;

 $X_1$  and  $X_2$  are, each independently, a linking group;

 $R_1$  and  $R_2$  are, each independently, a hydrogen, an alkyl group, an alkenyl group, a heterocyclic group, an aromatic group;

Z is a bridging group; and

5

n is a distribution of integers between 1 and 100,000 with an average value greater than 1; and

(b) a charge generating compound.

15 Corresponding electrophotographic apparatuses and imaging methods are described.
